

## **OWNER'S RESPONSIBILITY**

It is the **owner's** responsibility to operate the **SOLAR AIR** wastewater treatment plant to the best of their ability. The system is designed for residential wastewater use only: (human body waste and liquid waste). To insure proper operation and minimize problems, the following materials should not be allowed to enter the system.

1. Strong detergents, disinfectants, chlorine tablets in toilet tank, or bleaches (other than small amounts used in day to day house cleaning and laundries.) Follow manufacturer's recommended amounts when using the above mentioned items.
2. Do not allow any disposable items such as diapers, tampons, sanitary napkins, rubber products, large quantities of paper products, tobacco products, or similar items in the system.
3. Do not allow coffee grounds, chemical wastes, oils, or **grease** (such as cooking grease) into the system.
4. The discharge from any type of water softeners or similar equipment.
5. **IMPORTANT!** Keep ants away from the blower and control panel.
6. **In the event of problems, it is the owner's responsibility to contact the installer/maintenance provider in a timely fashion. Manufacturer's/Installer's name can be found on the front of the control panel. The Serial number can be found on the data plate of the timer box.**

## **WASTEWATER TREATMENT PLANT START-UP**

The **Solar Air** wastewater treatment plant should be filled with clean water, usually from the homeowner's water supply. As stated in the installation instructions, once all the proper connections have been completed, the tank has been filled with water and the blower is turned on, the system is ready to be operated.

It should be expected for the start-up process to take ten to twelve weeks to develop a population of micro-organisms or bacterial that can properly digest the wastewater from normal household use.

**There will be an odor during this stage. If the odor persists, contact your installer or maintenance provider.**
